THE UNIVERSITY OF
NOTRE DAME
AUSTRALIA

To whom it May Concern

In July 1998 The University of Notre Dame embarked on finding a student card system that would be able to satisfy both our immediate and future needs. The "Smart Card" system needed to be multipurpose and flexible in its functionality as well as providing security to both students and the University alike.

Monitor provided a solution that was simplistic in operation and very reliable. In December 2001 we upgraded our Monitor "Smart Card" system and expanded it to incorporate network printing. In addition to this via their TCP/IP technology we were able to bring online our Broome Campus. We have also implemented Monitor's Photo ID System for students and staff. The process of capturing personal details inclusive of photos for each card has proven to be simple.

The after sales service and support we have received from the service team has been of the highest quality. This ensured the overall installation went smoothly and with a minimum of fuss. To date we have been extremely happy with Monitor and their products and would happily recommend them to any prospective clients.

Regards
