TO WHOM IT MAY CONCERN

In early 1999 Taylors College (formerly Edwards College) was looking for a monitoring photocopy system to cater to the photocopying needs of our student population. In looking for a card solution to charge students for photocopying we did our research and finally took up the proposal from Monitor System. The decisive factor in arriving at that decision was the fact that it was competitively priced and upgrading the system would be at a minimum cost. The Monitor system also offered flexibility and was user friendly.

We have recently upgraded this system since the initial purchase of 1999. The new upgraded TCP/IP has expanded to incorporate network printing. This system has proven to be very effective and to date we have been happy with its operation.

I found the staff from Monitor to be very professional and prompt in all aspects of the sale and after-sale services. I would like to thank David Wells and his team for ensuring the installation went smoothly and our dateline was met without complications.

I would gladly recommend Monitor System and their products to companies looking for a smart card solution.

Yours sincerely,

Jessica Lim
Campus Services Administrator
